Take action to protect your life ...

Take action to protect your life. Your family evacuation action manual

Timing of evacuation

Weather conditions	Alert level	Weather information	Response of the municipality	Actions to be taken by residents
Several days to about one day before heavy rain	1	Early advisory (possibility of alert level)	<ul style="list-style-type: none"> ・Increase preparedness ・Check the contact system of staff 	Enhance disaster preparedness of mind
Half-a-day to a few hours before heavy rain	2	Heavy rain advisory Flood advisory	Primary disaster prevention system	Check your own evacuation actions Reconfirm the disaster risk of home, etc. using hazard maps, etc., and reconfirm the means of obtaining evacuation information, etc.
		Advisory that is likely to be changed to heavy rain alert	High tide advisory Secondary disaster prevention system (system to make an official announcement regarding evacuation of the elderly, etc.)	
Several hours to about two hours before heavy rain	3	Heavy rain alert Flood alert	Advisory that is likely to be changed to high tide alert	Evacuation of the elderly, etc. Third disaster prevention system (system to make an official announcement of evacuation instructions)
Heavy rain once in decades	4	Landslide alert information	High tide alert	Evacuation instructions Fourth disaster prevention system (establishment of disaster control headquarters)
			High tide emergency alert	Evacuation of all residents from dangerous places If a windstorm is expected due to a typhoon, etc., complete the evacuation before strong winds start blowing.
	5	Heavy rain emergency alert	Urgent safety assurance <small>※Information that is not always officially announced</small>	Threat to life Ensure safety immediately! A situation in which safe evacuation cannot be done and life is threatened. Move immediately to a safer place from the current location.

~~~~~ <Ensure evacuation before Level 4!> ~~~~~

※One advisory that is likely to be changed to heavy rain alert (landslide) from the night to the early morning of the following day corresponds to alert level 3 (evacuation of elderly people, etc.). Prepared by the Meteorological Agency based on the "Guidelines on Evacuation Information" (Cabinet Office)
